

daabBlitz

Welcome to the dabbing revolution. Ispure's daabBlitz is our most portable, cleanest hitting dab experience around.

Our sleek Heat Induction dab system is the first truly portable handheld dab device to use induction heating instead of torches or electrical heated ceramic cups.

The daabBlitz is at home anywhere you go, it's built rugged for any adventure whether you' re hiking, at the beach or in the snowy mountains.

The daabBlitz gives you the power to select your desired temperature for the perfect hit every time--anywhere.

From its borosilicate glass to its shock resistant polycarbonate bubbler, the daabBlitz was built to be self-contained and ready for a rough and tumble life ... it even has built-in dab spoon to conveniently load your rig while you' re on the go.

Completely read the User Manual BEFORE operating your ISPURE daabBlitz Device. Improper operation can lead to damaging the unit, voiding the warranty, and possible harm to the user.

INDUCTION HEATING explained

What makes the Ispure daabBlitz heating method so unique? Most common heating methods like a torch, or wire core ceramic cups apply heat directly to the part to be heated.

With induction heating, heat is induced within the part itself by circulating electrical currents magnetically. Induction heating relies on the unique characteristics of radio frequency (RF) Energy--the portion of the electromagnetic spectrum below infrared and microwave energy. Since heat is transferred to the product via electromagnetic waves, the concentrate cup never comes into direct contact with any flame or contaminant, the inductor itself does not get hot and there is no

To sum it up, when you start the heating cycle a magnetic field is created with the metallic sleeve which interacts with the magnetic field causing the sleeve to heat the glass which heats the concentrate. This is a clean and precise way to vaporize your product resulting in consistent and delicious

WHAT'S IN THE BOX

1x daabBlitz 1x Glass Stem 1x Carb Cap 1x Sling Bag

1x Tweezer

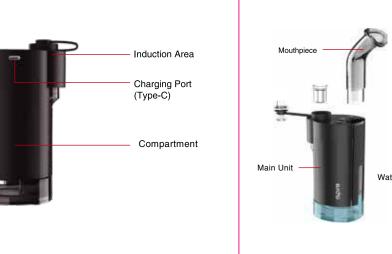

ASSEMBLY/OPERATION STEP-BY-STEP

daabBlitz ASSEMBLY ORDER

HOW TO OPERATE

1. Remove battery tabs and make sure the two included 18650 batteries are fully charged before use. When charging batteries through the provided USB-C Port, you'll need a 5V $\!\!/$ 2-6A charging block, or any USB charging port that offers 2A

2. Add water to the chamber. Fill water through the mouthpiece to MAX water line at base of bubbler on the back. Be mindful not to spill water on the control deck, as this could

cause damage to the electronics.

3. Press the Fire button 5 times quickly to turn On or Off device. Adjust the temperature using the plus or minus buttons. For first time use start at 400F to get an idea of how the temperature is and adjust from there.

(Temp range 250F -800F)

4. Press fire button two times to start the auto heating, the cup will flash purple while it heats to temperature and then turn solid purple when it's to temperature. The daabBlitz will also give an audible chirp at the same time. It is now ready to rip. The light will stay on until the temperature drops, then it will turn off and the display screen will tell you "Time Over."

Pressing the FIRE button When heating to the without a bowl/banger temperature or heating too operate. Please wait 5 inserted into the induction area will cause the LED indicator flash red on screen.

OSTEP BY STEP USAGE

HOT START DAB 1. Press the Fire button 2 times quickly to activate auto mode. Purple light flashes while heating in auto mode, purple light stays on when ready to dab. When the light is solid. drop your desired material into the bottom of the concentrate cup and

1. Place your desired material into the bottom of cup, and install the carb cap. Press the Fire button 2 times quickly to activate auto mode. Purple light flashes while heating in auto mode, purple light stays on when ready to dab. When the light

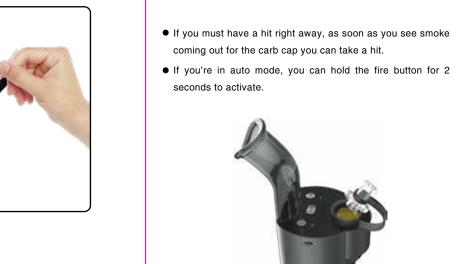

O daabBlitz PRO TIPS

Main Unit —

Water Chamber —

• Temperature control accuracy is dependent on the device being fully charged, and what outside temperature is. Convection temperature could vary slightly, but not enough to

 For best performance and longevity of the dab cup, it's best to clean the dab cup with cotton swab and alcohol every couple of uses, especially if you're switching to another material.

daabBlitz comes with built-in tweezers for ease of removing and installing concentrate cup. Simply pull them out with your finger and attach to the cup like in the photos below.

 If you must have a hit right away, as soon as you see smoke coming out for the carb cap you can take a hit.

O BATTERY RECOMMENDATION

if friends are visiting.

Ispure recommends using only 18650 batteries, available at: www.ispure.com

As with any high-performance device, high performance fuel is required. Ispure's induction devises use high performance batteries that can be depleted quickly depending on usage. When using higher temperature settings, the amount of heating cycles available will be diminished. Keeping the batteries charged between uses or during usage is suggested. An extra set of charged batteries are always a good idea

Recommended batteries: 18650 2900mAh-3500mAh 20A-30A

O SAFETY INFORMATION:

ISPURE INDUCTION DEVICES ARE NOT E.N.D.S. DEVICES AND ARE NOT INTENDED FOR USE WITH NICOTINE OR NICOTINE CONTAINING SUBSTANCES. THIS PRODUCT IS AN AROMATHERAPY DIFFUSER DESIGNED TO VAPORIZE HERBAL MATERIALS, CONCENTRATES, ESSENTIAL OILS

ISPURE INDUCTION DEVICES ARE NOT INTENDED FOR USE BY MINORS, INDIVIDUALS WITH RESPIRATORY ILLNESSES OR CHRONIC PULMONARY CONDITIONS. ANYONE ALLER-GIC TO ESSENTIAL OILS OR BY WOMEN WHO ARE PREG-NANT OR NURSING.

ISPURE INDUCTION DEVICES ARE NOT INTENDED TO DIAGNOSE, TREAT, CURE OR PREVENT ANY DISEASE. ISPURE INDUCTION DEVICES HAVE NOT BEEN EVALUATED BY THE FDA. USE SENSIBLY.

O WARNING: INDUCTION HEATING

Do not place any foreign metallic material in the glass top or bottom of the Induction Area. Induction heating systems will heat ANY CONDUCTIVE materials placed inside the electromagnetic fields. Do not leave dab spoon in the cup, it will get hot, load your device and remove the spoon.

O SEIZURE WARNING

A very small percentage of individuals may experience epileptic seizures or lackouts when exposed to certain light patterns or flashing lights. These conditions may trigger previously undetected epileptic symptoms or seizures in persons who have no history of prior seizures or epilepsy. If you, or anyone in your family has an epileptic condition or has had seizures of any kind, consult your physician before using.
